DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 112

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 22 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Is the claim a program or method?

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1,5-18,20,21, and 23 are rejected under 35 U.S.C. 102(e) as being anticipated by Thyssen et al. (6,633,841).

In regard to claims 1,5,13,18,20,21, and 23, Thyssen et al. shows in Figure 9, a method and system comprising: receiving a speech signal as a sequence of samples

arranged in frames including voice signals and background signals (item 910); detecting voice activity and providing an indicator when no voice activity is detected (item 950); encoding the speech signal to generate a plurality of parameters representing the signal, the plurality of parameters comprising a linear prediction calculation vector of quantized linear prediction filter coefficients, a gain parameter based on open-loop lag value, and a residual vector; and when the indicator is not present (item 970), outputting a first parametric representation of the speech signal comprising the plurality of parameters, and, when the indicator is present, modifying at least one of the plurality of parameters and outputting a second parametric representation of the speech signal including the modified parameter (item 980).

In regard to claims 6-12 and 14-17, Thyssen et al. inherently shows in Figure 9, item 970 that the modifying of at least one parameter includes comprises smoothing the parameter for a current frame based on characteristics of the parameter in other frames of the speech signal, wherein said other frames include adjacent frames. and producing a count of the number of received frames up to a predetermined maximum, and using said count in the modifying step, and wherein the modifying the at least one parameter includes comprises taking into account the energy levels associated with the parameter (col. 14).

Claim Rejections - 35 USC § 101

6. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

7. Claim 22 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The claim is directed to a computer program which is non-statutory.
